Tools: Python, Rust, Terraform, eBPF, Kafka, Clickhouse, Redis, Kubernetes, Argo CD, Open Telemetry.

Work Experience

Akamai Technologies.

October 2022 - April 2026

Senior Software Engineer II (Secure Internet Access)

London, England

- Architected and launched a next-generation DNS firewall protecting 280M+ daily DNS requests across 120+ enterprise customers, securing hybrid cloud and Kubernetes environments against DNS-based threats. Contributed to the expansion of Akamai's Zero Trust portfolio with an estimated \$15M+ ARR opportunity.
- Designed and implemented a behavioral authorization system performing real-time risk evaluation across identities, devices, workloads, and API actions, enabling dynamic access control beyond traditional RBAC and WAF approaches.
- Led the design and development of an LLM-powered analytics and reporting platform processing 5B+ network events monthly. Built Python-based data pipelines and retrieval workflows that transformed large-scale telemetry into customer-specific insights, anomaly detection, and automated remediation recommendations.
- Developed Retrieval-Augmented Generation (RAG) pipelines that combined enterprise security telemetry, product metadata, and customer context to generate personalized reports and actionable playbooks for customer success teams. The platform increased upsell engagement by 30%+ through thousands of AI-generated recommendations delivered directly to stakeholders.
- Engineered scalable AI services and APIs for LLM inference, orchestration, and structured output generation, enabling reliable integration of AI capabilities into existing security workflows while maintaining performance and observability at scale.
- Built an MCP/agent tooling server that interfaced directly with Akamai DNS systems, exposing DNS operations and telemetry as tools for AI agents. Enabled secure querying, diagnostics, and automated workflows across DNS infrastructure through standardized agent interfaces.
- Implemented deployment governance automation using Python and cloud-native tooling to validate telemetry, compliance, and performance metrics prior to release, reducing rollback incidents by 45% and accelerating release cycles by 35%.
- Developed and maintained distributed microservices and backend APIs deployed on Kubernetes using Infrastructure-as-Code principles with Terraform and GitOps workflows via Argo CD.

JPMorgan Chase & Co.

September 2021 - October 2022

Software Engineer (Credit Risk Management)

Glasgow, Scotland. UK

- Led the modernization of a legacy distributed calculation system, leveraging Python to architect scalable and efficient solutions, while migrating critical data sources to a cutting-edge data warehouse. This transformation significantly optimized data processing workflows and enhanced analytical performance.

- Owned the maintenance and enhancement of a mission-critical distributed codebase, ensuring the reliability and accuracy of systems that process and influence millions of trades and transactions daily, directly supporting the firm's risk management strategies.
- Collaborated with cross-functional teams, including data engineering and risk analysis stakeholders, to deliver robust, high-impact solutions that aligned with organizational risk management objectives.

Sidmach Technology Ltd.
December 2018 - 2019

Software Engineer
Abuja, Nigeria

- Developed and maintained a high-availability computer-based assessment application utilized by millions of students nationwide during the Joint Admissions and Matriculation Board (JAMB) examinations, equivalent to SAT or GCSE.
- Engineered and optimized a customer experience service portal and its data pipeline, enabling efficient visualization, capture, and formatting of customer data for advanced analytics and actionable insights.
- Contributed to the design and implementation of a biometrics-based attendance system for the National Youth Service Corps (NYSC), enhancing security and accountability in attendance tracking.
- Collaborated with cross-functional teams to deliver robust, scalable, and user-focused solutions, supporting large-scale national initiatives with high impact.

Nacoss.(ABUAD Chapter)
September 2017 - 2018

Software Director
Ekiti, Nigeria

- Mentored and guided undergraduate students in programming and software development, fostering technical growth and innovation among peers.
- Designed and implemented an electronic voting system using Java and JavaFX, ensuring secure and efficient voting processes for the NACOSS election.

Aptech
June 2016 - August 2017

Internship
Abuja, Nigeria

- Designed and developed interactive desktop applications using Java and JavaFX, integrating with relational databases (e.g., MySQL) to deliver responsive, user-centric software.
- Contributed to the full development lifecycle of small-scale projects, from requirements gathering to deployment, enhancing foundational skills in software engineering, OOP, and database management.
- Collaborated in an agile, team-based environment to solve real-world problems, improving code quality through version control and peer reviews.
- Focused on core Java problem-solving techniques, strengthening debugging and algorithmic thinking through hands-on experience.

Research Projects

- Designed and implemented a compiler for a domain-specific language (DSL) for olopa.io, a cybersecurity platform, enabling expressive definition of security rules.
 - Modelling Personal Wealth Dynamics: A Calculus and Monte Carlo Approach to Compounding and Risk [link](#).
 - Deep Reinforcement Learning for Collision Avoidance in a High-Way Simulation [link](#).
 - Detection of Changes in the Arctic with satellite image analysis and Unsupervised machine learning techniques [link](#).
 - Founded Olareport.com an AI powered educational platform for teachers, educators and students.
 - Secured Hybrid-Based Language Translation System.
-

Higher Education

Coventry University

MSc (Hons) Computer Science

Distinction, Dean's List of Academic Excellence

Afe Babalola University

BSc (Hons) Computer Science

GPA: 4.27/ 5.0

Awards and Honors

- Dean's List of Academic Excellence – Coventry University (2021)
- Most Innovative Student Award – NACOSS ABUAD Chapter (2018)
- 2nd Position – Nigeria Codefest Hackathon (2018)

Research Interest

Genetic Programming, Optimization, Formal Logic/Method, Reinforcement Learning, Compiler and Low Level Systems
